

Ki Activities for Earth Day

Compliments of the New Mexico Academy of International Studies (NMAIS)

Sun, dolphins, trees, globe – this is Ki, short for Kids International. Ki is six toys in one, representing a new children’s ecology program designed to reinforce the idea of caring for the earth and its many interconnections. Ki is an explorer, entertainer, conduit, storyteller, educator, playmate, guide and Earth Mother.

With our planet undergoing phenomenal change, there has never been such an unprecedented calling for humankind to reconnect – to Mother Earth and to one another. The growing environmental threats to our world require an informed, motivated, proactive response. The Ki Project supports this with a beautiful, hands-on learning toy that encourages children to explore a variety of inspirational, meaningful experiences to help them learn about and respond to our environmental crisis.

Schools, teachers and parents can be at the forefront of change with Ki. Children are invited to step into their senses and experience the magic of our natural world and our global community with Ki as their guide.

The New Mexico Academy of International Studies (NMAIS) offers a book with learning activities to jumpstart your creativity as you work with children to embrace environmental learning, using Ki as your spring board. Teachers, parents, students and the community are invited to use these ideas and create their own. Children will delight in these organic, fun approaches to experiential learning. Note the organizing questions for each activity to support focus and deeper learning.

We are all stewards of the earth with roles to embrace. Join us to support environmental learning and foster a healthier tomorrow. Join in to help save our planet.

**To purchase Ki (\$35 including activity book),
